US-CL-CURRENT: 713/1

ABSTRACT:

An automatic method and apparatus for providing services on a computer system. A set of

services is established providing different functionality for the computer system. With each of the set of services an attribute is stored for identifying characteristics of the function of each of the set of services. Then, the first set of services can be retrieved by a first set of attributes which is specified irrespective of any locales which may be defined in the computer system. Thus, characteristics or attributes of most importance to a service may be used to describe it and used for retrieval of such services. The establishing of the first set of services includes building a structure which references each of the first set of services. Retrieving may include maintaining a reference to one of the services in the structure and iterating through the structure in order to retrieve a subsequent one of the services. An iterator may be created which is used to iterate through the database of services and provide the services to application or system programs.

TITLE: System and method for national language support

DATE-ISSUED: January 14, 2003

INVENTOR-INFORMATION:

NAME	CITY	STATE	ZIP CODE	COUNTRY
Veditz; Daniel Paul	Felton	CA		
Schnepper; David Brett	Los Gatos	CA		

US-CL-CURRENT: 704/8; 717/137

ABSTRACT:

The present invention comprises a National Language Support (NLS) system with Language Driver Identifiers (LDIDs) embedded as locale-specific descriptors within data objects. The Identifiers, which may be in the form of a system-comparable ID (e.g., ID byte), are employed by the system in several places to record the particular language (driver) which was used when a given data object was created or modified. The LDID methodology of the present invention allows the system to intelligently process data objects created or modified under one language driver with those created or modified by a different language driver. In the event of incompatibilities, the system provides error handling routines, including a preferred interface for warning users of incompatibilities and receiving user choices in response thereof.

ABSTRACT:

A method implemented on a computer system for loading a module for input and for loading a module for output for an application program includes the steps of selecting the module for input, loading the module for input, selecting a module for output, and loading the module for output at a time different from the loading of the module for input.

TITLE: Crossing locale boundaries to provide services

DATE-ISSUED: November 11, 1997

INVENTOR-INFORMATION:

NAME	CITY	STATE	ZIP CODE	COUNTRY
Harvey, III; John	Wilmington	DE		
Daniels; Andrew Michael	Menlo Park	CA		
Saunders; William James	Mountain View	CA		

US-CL-CURRENT: 707/10

ABSTRACT:

A method and apparatus in a computer system for providing localized services on a computer system. Responsive to a request from a first process requesting a first international function, a database is scanned for a first service which provides the first international function. The database is arranged by locale. If the first service does exist in a first locale in the database, then a second locale in the database is scanned for the first service. If the second locale contains the first service then the first service is retrieved and made available to the first process. Thus, services for first process may span locale boundaries in the database wherein the first process

references at least two services which reside in at least two of the locales. The functions include sorting service functions, formatting service functions.

TITLE: System and methods for translating software into localized versions

DATE-ISSUED: October 14, 1997

INVENTOR-INFORMATION:

NAME	CITY	STATE	ZIP CODE	COUNTRY
Hinks; Paul	Santa Cruz	CA		
Lok; James Shian Hwa	San Jose	CA		

US-CL-CURRENT: 707/4; 345/835, 707/203, 707/3, 707/6, 715/533

ABSTRACT:

A Software Translation Kit (STK) system having a shell, TShell, coupled to an Export/Import module and various Editors is described. The Export/Import module itself includes a parsing engine to extract strings and translatable information from application programs. It functions as a front end parser to "translatable" sources, providing data conversion as needed. The STK system provides a standard interface and set of tools which can be used to localize graphic user interface products. By employing a datacentric approach, the system provides a standard platform which allows translators to act independently of the product they are translating.
